

The very top of the towers were designed for clasps from small 1" to over 2".

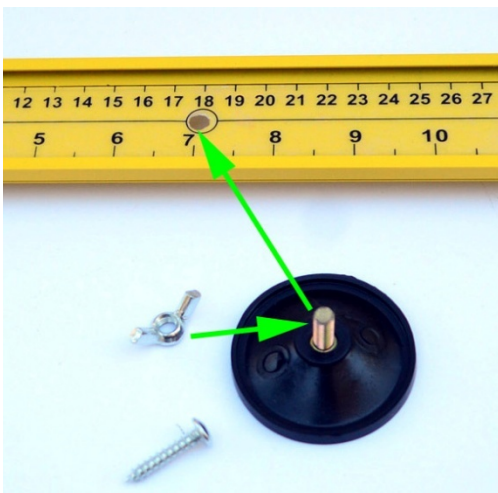

Threaded rod and nut can be used for various hooks, snaps, and accessories.

The hole cutouts can be used for hooks and snaps. There's also a horizontal threaded rod that can be used for a variety of paracord hardware.

The jig can be secured to a flat clean surface using the supplied suction cup and wing nut. We also include one wood screw if you desire to secure it permanently to a work bench.

We have been making and selling jigs for 5 years. Over the years we have made many revisions to improve our design. With our 2018 revision we have designed a whole new jig. We wanted an even more light weight jig that could collapse to a small area. We hope that it can make paracord in bulk faster and more productive.
